

# TEDI – Timely Emergency Decisions and Interventions

## Lady Cilento Children’s Hospital (LCCH)

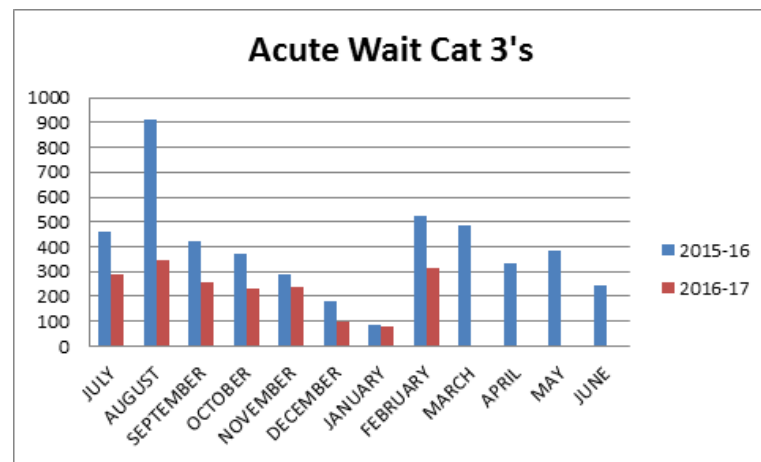

**Problem:** NEAT performance data for the combined LCCH emergency department was demonstrably worse than that achieved at other children hospitals.

**Solution:** 5 core solutions were implemented:

- Standardise streaming
- Standardisation of staffing allocations
- Early decision making and interventions
- Improved signage and ease of access within the department
- Embedded multidisciplinary team based care

**Results:** Since solution implementation:

- Discharge NEAT has improved from 89% to 92%
- Senior review within two hours has improved from 79% to 85%
- Referred from consultation has improved from 67% to 70%
